Assignment -3

10/16/2022

My experience was very good on working this assignment. I used bootstrap frame work and my theme was Southern Connecticut state university. I thought it my last semester, so why not making some theme related to our university. It pretty state forward, it had all the information about how to apply and what courses Southern offers. I learned a lot on how to format pictures and videos together. A little problem I face during this assignment was, when I was changing something in the CSS file and it was not reflecting on the local host. So, I had to figure out that, I need to delete cache and cookies every 5 mins because the local host was still stuck in the previous changes session. So that's something new I learned from this assignment, and I hope to learn more about Bootstrap framework and other advance element. But my over all experience was very good.
